

COMPOSE Onboarding — Version B (Batched Clinical Cards, No Hope Lines)

Final screen-by-screen specification. In this version, the assessment runs uninterrupted; all four Clinical Context cards are batched after the Symptoms screen, and no hope/tease lines appear on the dark cards. Copy is final and paste-ready.

Revision 1.1 — QUITTR teardown deltas applied: escalation question, Map baseline gauge + Conditioning drift bar, two reserved testimonial slots, paywall-dismiss screen, post-purchase notes.

Global Design Rules (apply to every screen)

Visual language: "Twilight Anchor." Dark mode only — deep blacks (#0A0A0A), charcoal cards (#1A1A1A), warm sand accent (#C9985F) for CTAs and progress. Serif for headlines and questions, sans-serif for sub-text and options. High contrast, minimal, grounding.

Persistent footer (every question screen): "Answers stay on this phone. Always." — very small text, bottom center.

Progress header (every screen after Welcome): "MAPPING · X OF Y" top-left, thin sand progress bar beneath, "~N min left" top-right, counting down.

Layout rules: one question per screen; single primary CTA; full-width tappable answer cards; auto-advance on single-select after a 250ms selected-state; Continue button for multi-select screens. Back arrow available top-left from screen 3 onward.

Variant rule (B): no clinical cards inside the assessment. All four run consecutively after Symptoms, in the order: Adrenaline Trap → Default Mode Network → Novelty Loop → Why Band-Aids Fail. Omit all hope-tease closing lines.

Opening

B-01 — Welcome 1 (Opening)

Small heading: COMPOSE

Headline: Your body isn't failing you. It's following orders.

Sub-text: Over the next few minutes we'll map where those orders come from. Every answer stays on this phone.

Privacy line (lock icon): Private by design — no account, no sync, no lock-screen tells

Micro-text (above button): Takes about 4 minutes

Button: Find my baseline

B-02 — Welcome 2 (Roadmap)

Small heading: WELCOME

Headline: First, we understand. Then, we build.

Body: Before we suggest anything, we need to understand what's actually happening. Not just in your body — in your nervous system and in your head. Most fixes pick one. The problem lives in both.

Body (second block): First, the body. Then, the mind. Then we build your protocol around what we find.

Button: Start with the body

Part 1 of 3 — Your Situation

SECTION TRANSITION SCREEN: "PART 1 OF 3 · YOUR SITUATION" — BRIEF INTERSTITIAL, AUTO-ADVANCE 1.5S

B-03 — Question — Relationship status

Question: What is your current relationship status?

Selection type: Single-select

- Single
- Casual dating
- Committed relationship
- Married
- Recently out of a relationship

Design note: This answer drives the branch on the Partner Impact screen later in the flow.

B-04 — Question — What brings you here

Question: What brings you here? Tap everything that applies.

Selection type: Multi-select

- I finish too quickly
- I struggle to maintain my erection
- I get trapped in my own head (performance anxiety)
- I've started avoiding intimacy altogether
- I want to deepen the intimacy in my relationship

B-05 — Question — Duration

Question: How long has this been affecting your intimate life?

Sub-text: However long it's been: conditioned means learned, and learned means reversible.

Selection type: Single-select

- Less than 6 months
- 6 months to 2 years
- 2 to 5 years
- More than 5 years
- As long as I've been sexually active

B-06 — Question — Attribution

Question: How did you hear about us?

Sub-text: Helps us reach men like you.

Selection type: Single-select

- Facebook
- Instagram
- TikTok
- X
- YouTube
- Reddit
- Podcast
- Google
- App Store search
- My doctor or therapist
- A friend
- Other

B-07 — Question — Name

Question: What is your name?

Sub-text: First name only. Like every answer here, it never leaves this device.

Input: Text field, placeholder: "Your first name"

Button: Continue

B-08 — Question — Age

Question: How old are you?

Input: Vertical wheel picker, exact age

Button: Continue

Design note: Age feeds the dynamic line on Your Map ("conditioned over roughly X years").

Part 2 of 3 — The Body

SECTION TRANSITION SCREEN: "PART 2 OF 3 · THE BODY"

B-09 — Question — Pills, sprays, creams

Question: Have you ever tried pills (Viagra/Cialis), sprays, or numbing creams to fix this?

Sub-text: Most men start here. Pills move blood. They don't touch the signal telling your body it's under threat.

Selection type: Multi-select (checkboxes)

- Pills (Viagra/Cialis)
- Sprays or numbing creams
- Supplements or testosterone boosters
- None of these

B-10 — Question — Morning arousal

Question: When you wake up in the morning, does your body show physical arousal on its own?

Sub-text: This tells us whether the machinery works when nothing is being asked of it. If your body fires on its own, the problem isn't the hardware — it's the interference.

Selection type: Single-select

- Most mornings
- Sometimes
- Rarely or never
- Not sure — I've never paid attention

B-11 — Question — Libido

Question: Rate your libido over the past month.

Input: Slider, 1–10

Anchor labels: 1 = I rarely think about sex · 10 = Strong desire most days

Button: Continue

B-12 — Conditional Card — Physician note (triage)

Display logic: Show ONLY if Morning arousal = "Rarely or never" AND Libido rating ≤ 3 . Otherwise skip entirely.

Small heading: A QUICK NOTE

Title: Worth a physician visit

Body: Your last two answers can sometimes point to physical causes — hormonal or circulatory — that deserve a real exam. Compose retraining the nervous system; it doesn't replace bloodwork. Keep going here, and book the check-up too.

Button: Understood — continue

Design note: Calm tone, no alarm styling. This screen is a trust asset, not a warning.

B-13 — Question — Adrenaline spike

Question: When you initiate intimacy, do you feel a sudden spike in your heart rate, or a rush of nervous adrenaline in your chest?

Sub-text: That surge is adrenaline — a nervous-system reflex, not a verdict on you.

Selection type: Single-select

- Yes — it feels close to panic
- A noticeable surge, but I push through
- Occasionally
- No, I stay calm

B-14 — Question — Breath at the edge

Question: In the final moments — right before you finish, or as you feel yourself fading — what happens to your breathing?

Sub-text: Breath under arousal is the clearest window into your nervous system. Most men have never been asked.

Selection type: Single-select

- It gets shallow, or I hold it
- Honestly, I've never noticed

- It stays slow and deep

B-15 — Interactive — The Pelvic Floor Check (4 sub-screens)

Sub-screen 1 · Headline: Let's feel it, not describe it.

Sub-screen 1 · Sub-text: Chronic pelvic tension is the physical arm of the adrenaline trap. Twenty seconds gives us your baseline.

Sub-screen 1 · Reassurance line: Completely invisible — no movement, no sound, nothing anyone could notice. You can do this in a waiting room.

Sub-screen 1 · Steps: 1. Sit comfortably, feet flat on the floor. 2. On Begin, clench your pelvic floor — as if stopping urine flow. 3. Hold five seconds, release fully on cue. Notice what release feels like.

Sub-screen 1 · Button: Begin the 20-second check

Sub-screen 1 · Secondary link (low emphasis): Skip for now

Design note: Skippers are flagged; the check becomes their Day 1 opener. Nothing lost diagnostically.

Sub-screen 2 · Countdown ring: 5-second ring, label "CLENCH & HOLD"

Sub-screen 2 · Instruction: Squeeze your pelvic floor firmly upward and inward.

Sub-screen 3 · Countdown ring: 10-second ring, label "RELEASE & OBSERVE"

Sub-screen 3 · Instruction: Let go completely. Notice how fully your muscles can relax.

Sub-screen 4 · Question: After releasing, what did you notice?

- Complete release — I felt clear relaxation
- Partial release — some tension remained
- Difficulty releasing — stayed contracted

B-16 — Testimonial Slot — RESERVED (Directly after the pelvic check result — the moment a skeptic thinks "does this stuff actually work?" Quote should reference the somatic work: body awareness, the daily sessions, the release)

Status: Placeholder — do NOT populate at launch. Consented beta quotes only, first names only, written permission on file. Never fabricate (FTC).

Layout: Single quote card: large quotation, first name + age, thin sand rule. One quote per slot — a lone specific voice outperforms a wall of praise.

Placement logic: Directly after the pelvic check result — the moment a skeptic thinks "does this stuff actually work?" Quote should reference the somatic work: body awareness, the daily sessions, the release.

Design note: Until a real quote exists, this screen is skipped entirely — the flow simply advances past it. Design it, gate it behind a remote flag, ship it dark.

Part 3 of 3 — The Mind

SECTION TRANSITION SCREEN: "PART 3 OF 3 · THE MIND"

B-17 — Question — Adult content frequency

Question: In an average week, how frequently do you rely on highly visual stimulation (adult content) during solo sessions?

Sub-text: No judgment in this question — it maps how your arousal system has been trained.

Selection type: Single-select

- Rarely or never
- 1–2 times
- 3–5 times
- Daily or more

B-18 — Question — Escalation (tolerance)

Display logic: Skip this screen if adult content frequency = "Rarely or never."

Question: Over time, has it taken more extreme or more novel content to feel the same arousal?

Sub-text: That drift is tolerance — a trained response, not a character flaw.

Selection type: Single-select

- Yes, noticeably
- Somewhat
- No
- I'd rather not say

Design note: "I'd rather not say" preserves the no-judgment contract and is itself signal. Answers of Yes/Somewhat feed the Novelty Loop card's conditional line and the "Conditioning drift" bar on Your Map.

B-19 — Question — Spectatoring

Question: During intimacy, do you ever feel like you're watching yourself from the outside — evaluating instead of experiencing?

Sub-text: Clinicians call this "spectatoring." It has a name because it's common.

Selection type: Single-select

- Yes — almost every time
- Sometimes
- Rarely
- Never

B-20 — Question — Partner impact (BRANCHED)

Branch logic: If relationship status = Committed relationship or Married → Variant P. If Single, Casual dating, or Recently out → Variant S.

Variant P · Question: When things don't go as planned in the bedroom, how does it affect the connection with your partner?

Variant P · Sub-text: Most men have never said this part out loud. Here, you're just tapping a card.

- My partner blames themselves
- There's tension we don't talk about
- We've stopped being intimate as often
- We're working through it together

Variant S · Question: When things went wrong in past encounters, what did it leave you with?

Variant S · Sub-text: Most men have never said this part out loud. Here, you're just tapping a card.

- I stopped pursuing people
- Dread before every new encounter
- I keep things from getting physical
- It's part of why I'm single now

B-21 — Question — Aftermath (follow-up)

Question: In the hours after it happens, what hits hardest?

Selection type: Single-select

- Shame
- Anger at myself
- Numbness
- Fear of the next time

B-22 — Question — Avoidance

Question: How often do you avoid initiating sex because of how your body might respond?

Selection type: Single-select

- Frequently
- Sometimes
- Rarely
- I've stopped initiating altogether

B-23 — Question — The scripts

Question: When a session ends prematurely or falters, which of these run through your mind? Tap every one that shows up.

Sub-text: These are scripts, not facts. Naming yours is the first step to interrupting it.

Selection type: Multi-select

- "I am broken"
- "She is disappointed in me"
- "I will never fix this"
- "I'm less of a man"

B-24 — Question — Spillover

Question: Does it follow you out of the bedroom — into work, friendships, how you carry yourself?

Selection type: Single-select

- Yes — it touches everything
- Sometimes
- No — it stays in the bedroom

Analysis

B-25 — Generating — Building your map

Visual: Dark screen, single progress ring (0→100%), 4–6 seconds total. No skip button.

Staged checklist (ticks in sequence, varied cadence — two fast, one slow, fast): Autonomic profile ✓ · Pelvic baseline ✓ · Arousal conditioning map ✓ · Cognitive script index ✓ · Sequencing your 75-day protocol...

Design note: Soft haptic on each tick. The final item takes longest — perceived computation increases the perceived value of the Map that follows.

B-26 — "Your Map" — Analysis results

Small heading: YOUR MAP

Headline: [Name], here is what your answers show.

Composure Score: Large number, e.g. "41 / 100" — computed from weighted answers. Label: "Your Composure Score — re-measured at Days 14, 40, and 75."

Baseline gauge (below the score): Horizontal gauge. User's score marked (e.g. 41). Shaded zone at 80–100 labeled: "Calm baseline — where the protocol trains you toward." Caption: "The gap is the work. 75 days is the route."

Bars (each with severity chip, amber/red): Sympathetic override — Moderate · Spectatoring loop — High · Pelvic release capacity — Partial · Avoidance pattern — Elevated · Cognitive scripts — Active · Conditioning drift — Present (show this bar only if escalation = Yes/Somewhat)

Mirror sentence (dynamic, built from their answers): Example: "Breath-holding at the edge, spectatoring most sessions, partial pelvic release — that triad is the adrenaline trap, and yours has been conditioned over roughly 11 years."

Body: This is a conditioned adrenaline response. Conditioned means learned — and learned means reversible. Your 75-day sequence is built.

Button: See my protocol

Footer (this screen): Stored on this device only

Design note: Severity labels only — no invented percentiles or population averages. Every bar must trace to a question the user answered. The gauge compares the user to the trained baseline, never to a fabricated "average man."

B-27 — Symptoms — Multi-select checklist

Headline: The cost isn't only in the bedroom.

Sub-text: When your nervous system treats intimacy as a threat, it pays a tax everywhere. Tap anything you've noticed lately:

Group — MIND: Hard to concentrate · Brain fog · A background hum of anxiety · Low drive to chase goals

Group — BODY: Low sex drive · Tired for no clear reason · Restless sleep

Group — CONNECTION: Avoiding intimacy with my partner · Pulling away from people · Less interest in going out

Group — SELF-IMAGE: Low confidence · Feeling unattractive or unworthy · Feeling like less of myself

Button: Continue

Clinical Context Block (batched)

B-28 — Clinical Card — The Adrenaline Trap

Small heading: CLINICAL CONTEXT

Icon: Lightning bolt icon

Title: The Adrenaline Trap

Body: What you are experiencing is not a physical defect. It is a sympathetic nervous system override. Your brain is mistakenly treating intimacy as a high-stress exam, flooding your body with adrenaline. Adrenaline constricts blood vessels and accelerates reflexes.

Button: I understand

B-29 — Clinical Card — The Default Mode Network

Small heading: CLINICAL CONTEXT

Icon: Brain icon

Title: The Default Mode Network

Body: That shame loop is generated by your Default Mode Network (DMN) — the brain's self-referential replay circuit. It tags bedroom falters as threats, making the anxiety worse next time.

Button: Continue

B-30 — Clinical Card — The Novelty Loop

Small heading: CLINICAL CONTEXT

Icon: Loop/repeat icon

Title: The Novelty Loop

Body: Every session is a training rep. High-novelty stimulation compresses arousal into a sprint: spike, finish, close the tab. Run that loop a few hundred times and your nervous system masters exactly one tempo — fast, alone, on demand. Then you're with a real person, and your body runs the only program it knows.

Conditional line 1: Show ONLY if adult content = "Daily or more": "At daily frequency, this is likely the strongest single input shaping your arousal system right now."

Conditional line 2: Show ONLY if escalation = "Yes, noticeably" or "Somewhat": "You've already felt the drift — needing more to feel the same. That's the loop deepening. It runs in reverse, too."

Button: Makes sense

B-31 — Clinical Card — Why Band-Aids Fail

Small heading: CLINICAL CONTEXT

Icon: Pill icon

Title: Why Band-Aids Fail

Body: Pills move blood. Creams numb skin. Neither reaches the amygdala — the alarm that started all of this. And there's a quieter cost: every pill is a rehearsal of the same belief — that your body can't do this without help. A fix that keeps you dependent isn't a fix. It's a subscription to the problem.

Button: I understand

The Turn — Hope and Desire

B-32 — Positive Card — The 75-Day Blueprint

Small heading: CLINICAL CONTEXT

Icon: Target/rings icon

Title: The 75-Day Blueprint

Body: Your system learned this. It can learn something else. University College London researchers tracked how long a new behavior takes to become automatic: 66 days on average. Compose runs 75 — past the threshold, with margin. Not a trick to try tonight. A rewiring, sequenced daily: reset the alarm, retrain the body, consolidate the new default.

Closing line: Ten minutes a day. That's the entire ask.

Button: Show me the journey

B-33 — Hopeful Arc — 5 screens

Hopeful 1 · Small heading: COMPOSE

Hopeful 1 · Headline: You're exactly where you should be.

Hopeful 1 · Body: Everything you just mapped — the adrenaline, the spectating, the scripts — is precisely what Compose was built to reverse. From here, everything is forward.

Hopeful 1 · Button: Continue

Hopeful 2 · Headline: Ten minutes. Headphones on. Eyes closed.

Hopeful 2 · Body: One guided audio session a day. No screens to watch, nothing to read, nothing to perform — because the work happens in your body, not on a display.

Hopeful 2 · Button: Continue

Hopeful 3 · Headline: 75 days. Three phases. One button.

Hopeful 3 · Body: Autonomic Reset (Days 1–25) quiets the alarm. Somatic Exposure (Days 26–50) retrains the body. Identity Consolidation (Days 51–75) makes calm the new default. You never decide what to do next — the sequence decides. And your Composure Score is re-measured at Days 14, 40, and 75, so you watch it move.

Hopeful 3 · Visual: Three-stage path graphic with the user's start date marked.

Hopeful 3 · Button: Continue

Hopeful 4 · Headline: For the moments that count.

Hopeful 4 · Body: SOS: one tap, sixty seconds. 4-7-8 breathing and sensory grounding that intercept panic in real time — built for the bedroom doorway, usable anywhere. Yours from Day 1.

Hopeful 4 · Button: Continue

Hopeful 5 · Headline: Private by architecture.

Hopeful 5 · Body: No account. Your answers never leave this phone. Neutral notifications, Face ID lock, hidden app switcher — and your card statement reads Apple, never this app's name.

Hopeful 5 · Button: Continue

B-34 — Credibility — The Foundations (replaces celebrity quotes)

Small heading: THE FOUNDATIONS

Headline: Built on fifty years of clinical method.

Body: Compose is built on Sensate Focus (developed by Masters & Johnson, 1970), Cognitive Behavioral Sex Therapy, and Polyvagal-informed breathwork — the same frameworks used in clinical sex therapy.

Stat card 1: In younger men, most erectile difficulty is psychological, not physical. The machinery works — the signal misfires.

Stat card 2: Performance anxiety is the most common thread across ED and PE — and conditioned responses respond to retraining.

Placeholder (add when signed): "Protocol reviewed by [Name], [Credentials]" — licensed advisor line, with permission.

Button: Continue

B-35 — "Your Path to Freedom" — Diverging graph

Headline: Two directions. No standing still.

Visual: Two curves diverging from a shared "Today" point. Y-axis label: "Composure." No numeric values.

Lower curve annotation: Without retraining: avoidance compounds — every skipped attempt deepens the loop.

Upper curve annotations (phase-marked): Day 25 — the alarm quiets · Day 50 — the body leads · Day 75 — the new default

Caption (small): Illustrative — conditioning deepens with repetition, in either direction.

Button: I want the upper path

B-36 — Choose Your Goals (absorbs the future-self question)

Headline: What are you taking back? Tap all that apply.

Selection type: Multi-select cards

- Feel calm and present during sex — instead of watching myself
- Stop rehearsing failure before anything has happened
- Initiate again — without the dread
- Give my partner all of me, not the anxious version
- Date without a countdown running in my head
- Trust my body again
- Carry the confidence outside the bedroom too
- Finish this program knowing it's handled — for good

Free-text field (optional): In your own words — what changes?

Button: Lock in my goals

Design note: Selected goals and free text are echoed verbatim at the top of the paywall, on the paywall-dismiss screen, and on Day 1.

Commitment and Close

B-37 — Commit Question

Headline: Every day for 75 days: headphones on, ten minutes, your session.

Body: Some days it will feel like nothing is happening. That's what rewiring feels like from the inside.

Question: Can you give it ten minutes a day?

Button (single, primary): Yes — I'm in

Secondary link (low emphasis): I have doubts

Doubt interstitial · Body: Doubt is fine. The protocol doesn't need your confidence — it needs your ten minutes.

Doubt interstitial · Button: Yes — I'm in

B-38 — Building Plan (brief beat)

Text: Based on your answers, we've built your plan.

Design note: Maximum 2 seconds — the labor-illusion budget was spent on the Generating screen. Momentum must carry into the paywall.

B-39 — Paywall

Top line (dynamic): Your goal: "[user's own goal words, echoed verbatim]"

Profile recap card: Your Autonomic Profile · from your answers — Sympathetic override: Moderate · Spectatoring loop: High. Caption: "Reversible with daily somatic retraining."

Headline: The 75-Day Reset, built for this profile

Price anchor (left card, struck through): Sex therapy, 12 weeks — \$1,800+

Offer (right card, highlighted): COMPOSE, 75 days — \$49.99 once

Design note: Price is a variable: A/B \$49.99 / \$59.99 / \$69.99 via RevenueCat Experiments. Never test downward. Never discount under pressure.

Risk reversal card: 14-day baseline check — If your Composure Score hasn't moved after 14 days, we'll show you exactly how to request a full refund from Apple — one tap.

Locked features block · Heading: PHASE IV · LOCKED UNTIL DAY 76

Locked features block · Body: The work of the next 75 days is getting out of your head. Mid-moment troubleshooting — analyzing, adjusting, managing — is the adrenaline loop with better vocabulary. So the advanced tools stay sealed until the reset they would interrupt is complete.

Locked features (with lock icons): Somatic Copilot — scenario-matched interventions for real moments · Sensate Mastery — ride high arousal without leaving your body · The Refractory Window Guide — the neuro-mechanics of the recovery window · The Anxious Partner De-escalator — scripts that settle your partner's nervous system, word by word

Locked features · Footer: Unlocks with the Maintenance Toolkit — your choice on Day 76.

Positioning line (italic): Pills and creams manage tonight. This retrains the system.

Trust card: No subscription. Your card statement shows Apple — never this app's name. Notifications stay neutral.

Testimonial row — RESERVED: One consented beta quote, first name only, between the trust card and the button. Hidden until a real quote exists. Never fabricate.

Button: Continue to Day Zero

Links: Restore · Privacy · Terms

B-40 — Paywall Dismiss — "When you're ready"

Display logic: Triggered once, on the user's first attempt to close or back out of the Paywall or Day Zero screen. Never shows a discount, a timer, or a counter-offer. Shown at most once per session.

Headline: Your map is saved.

Element 1: The user's Composure Score, dimmed, with the baseline gauge.

Element 2 (dynamic): His own goal words, quoted: "[free-text / selected goals]"

Body: Everything you mapped stays on this device. It will be here when you're ready.

Primary button: Keep going

Secondary link (low emphasis): Exit for now

Design note: The anti-QUITTR close. No urgency theater — restraint here is the brand. A returning user lands on this same screen, score intact: the honest version of a win-back.

B-41 — Day Zero — Signature + Purchase

Small heading: DAY ZERO

Headline: This only works if you show up. So we start with your word.

Oath card (italic serif): "For the next 75 days I will give this ten minutes a day. Not to perform better — to stop performing at all."

Signature field: Sign your first name — script-style input. Caption: "Signed on this device · seen by no one"

Chips (three): 75 days · 10 min a day · \$0.67 a day, once

Button (triggers purchase): Sign & begin — \$49.99

Sub-line: One payment. No subscription.

Design note: The signature must be typed before the button activates. Purchase fires on this button, not on the paywall screen.

B-42 — Discretion — Post-purchase setup

Small heading: DISCRETION

Headline: Unreadable at a glance

Sub-text: How Compose appears on your home screen, lock screen, and anywhere outside the app.

App icon & name selector: Compose (default) · Habits · Breathe

Toggle 1: Neutral notifications — "Today's session is ready." Never more.

Toggle 2: Face ID to open — a handed-over phone shows nothing.

Toggle 3: Hide from app switcher — covers the preview card when you switch apps.

Footer line: Billing is handled by Apple. Your card statement shows Apple — never this app's name.

Button: Begin Day 1

Post-Purchase Notes (for the product spec, beyond onboarding)

Session-start micro-pledge: each day opens with a single line above the one button — "Day 12. Ten minutes. Nothing else today." Tap to begin. A daily re-commitment costs one tap and re-anchors the Day Zero oath.

Phase-path fill: the three-phase path graphic from the hopeful arc becomes the home screen's progress spine, filling as days complete. Milestones at Days 14, 25, 40, 50, 75 — re-measurement days pulse gently.

App Store review prompt: never during onboarding. Ask at the first genuine win — completion of Day 1's session, or the Day 14 re-measure if the Composure Score moved. Fewer ratings than a pre-paywall prompt, worth more per rating.

Day 75 graduation: Composure re-measure → certificate moment → Maintenance Toolkit / Phase IV offer (annual-first) → optional "give the protocol" gift at half price, anonymously. Generosity framing, discretion preserved.
